PROFILE

PHP Developer with **10+ years** delivering production systems across health insurance, fleet management, and enterprise platforms. Experienced across the PHP ecosystem — **Laravel**, **Symfony**, and **CodeIgniter** — from greenfield builds to legacy modernization. Started as a DBA, so I approach every system with fluency in both the data layer and the product level. Built systems handling **10,000+ real-time GPS reports** and **20,000+ insurance records** in daily production. Copenhagen-based, available for backend or full-stack roles, remote or on-site.

EXPERIENCE

Software Engineer

Aug 2025 – Jun 2026

[Maxtracker S.A. – Argentina](#)

- Led architecture decisions and drove modernization of a large-scale legacy codebase for a fleet platform tracking **10,000+ active vehicles** in real time — spanning GPS tracking, analytics, and asset management
- Served oil & gas, mining, construction, and logistics industries across Latin America

PHP Web Developer

Apr 2022 – Aug 2025

[mydigitalnomads – Cyprus \(remote\)](#)

- Owned the PHP backend for a **high-traffic consumer platform** serving tens of thousands of active users, from API design through deployment
- Led a systematic legacy-code modernization effort — replacing ad-hoc scripts with maintainable, tested architecture — while tuning performance under real production load
- Operated fully remote for **3+ years** across a distributed international team, collaborating asynchronously with no dedicated overlap hours

Web Developer

part-time

Apr 2022 – Present

[OSPL – Argentina](#)

- Ongoing monthly maintenance and iterative improvements on the affiliate management system

Web Developer

Nov 2019 – Apr 2022

[OSPL – Argentina](#)

- Built from scratch in vanilla PHP a system handling **20,000+ affiliates** across 5+ branches throughout Argentina
- Covers member records, medical authorizations, and multi-branch coordination

Database Administrator

Jan 2014 – Nov 2019

[Mutual Senderos – Argentina](#)

- Primary DBA for maintenance, optimization, and security of company databases
- Built deep SQL expertise in indexing, query optimization, and schema design
- Grew into web development, delivering internal and public-facing systems

SKILLS

Frameworks

[Laravel](#) [Symfony](#) [CodeIgniter](#) [WordPress](#)

Backend

[PHP 8](#) [REST APIs](#) [Auth & Authorization](#) [Security](#) [Legacy Modernization](#)

Database

[MySQL](#) [PostgreSQL](#) [MongoDB](#) [Query Optimization](#) [Migrations](#)

Frontend

[JavaScript](#) [TypeScript](#) [HTML5](#) [CSS3](#) [Responsive Design](#)

Tools

[Git](#) [Docker](#) [GitHub Actions](#) [Linux](#) [Cloudflare](#) [Web Scraping](#) [Automation](#)

Practices

[Code Review](#) [Technical Documentation](#) [Performance Tuning](#)

PROJECTS

SaludAR

Multi-tenant SaaS platform for Argentine health insurers — a Laravel remaster of the legacy OSPL system, generalized so any client onboards on its own subdomain with an isolated database. Self-hosted on AWS (EC2, RDS, Route 53 wildcard SSL) with offsite S3 backups.

saludar.com.ar  private codebase

Quiero Vender

Multi-tenant PHP marketplace built without a framework. Sign-up auto-provisions an isolated store with product gallery, multi-image upload, and WhatsApp/email contact. Security-first: TOTP 2FA, expiring reset tokens, RBAC, PDO prepared statements.

quiero-vender.com

Portfolio & Job Board

Static site with a password-gated job board. Python scraper aggregates listings from 12+ sources daily via GitHub Actions; Groq LLM integration via Cloudflare Worker.
